

Press release

Durable and consistently aggressive

The high performance **VICTOGRAIN** abrasive provides impressive economic benefits. PFERD reports significant positive feedback from the market.

More powerful than any other abrasive – **VICTOGRAIN** from PFERD

“When we launched **VICTOGRAIN** in 2018, we looked forward to experiencing the market’s reaction, as we thought that demand for such a high-performance abrasive would be limited,” recalled Ralf Heimann, product manager for abrasives on substrates and other products at August Rüggeberg GmbH & Co., the Marienheide-based manufacturer of tools for working on surfaces and cutting materials. Today we know that the cautiously optimistic expectations we had back then have been greatly exceeded. “We are receiving extremely positive feedback from users, and not only those who do coarse machining: we hear from a wide variety of users in many disciplines. They all confirm that our **VICTOGRAIN** tools are changing the nature of grinding and have modernized it.”

Of course most users value the enormous power of the triangular, precision-moulded high performance abrasive. “**VICTOGRAIN** outperforms other, established solutions by up to 30% – with a consistent degree of aggressiveness,” said Heimann. It performs impressively in use. While other abrasives offer a similarly high level of aggressiveness at the beginning of use, it usually

decreases after a certain amount of time in use. Users would usually respond by replacing the tool, but they do not replace **VICTO**GRAIN tools due to their sustained level of aggressiveness. This feature and a high stock removal rate make **VICTO**GRAIN tools highly efficient. "Users appreciate this, as they benefit from an efficient machining process with fast work progress, a long tool life and a reduced influx of heat into the workpiece."

VICTOGRAIN abrasive grain triangles are fixed to the substrate on one side. This means they are integrated very securely and in conjunction with their streamlined design, they provide an extremely large chip space that makes the machining process even more efficient. "The structural design of the **VICTO**GRAIN triangles is specially adapted as well," explained Ralf Heimann. "The very small crystals inside the triangles ensure optimum wear characteristics." Very sharp cutting edges are always exposed and only the minimum necessary amount of the abrasive grain or the triangle breaks off.

"During use, the uniformly sized and shaped triangular abrasive grains on **VICTO**GRAIN's cutting edge contact the workpiece at an optimum angle," said the product manager to describe the actual grinding process. This means the individual abrasive grain requires very little energy to penetrate the workpiece. For coarse stock removal using angle grinders, PFERD offers three different tool types: The classical fibre disc, the patented COMBICLICK quick-clamping and cooling system, and the CC-GRIND-SOLID or CC-GRIND-ROBUST system (currently available only in Europe but available worldwide from April 2022) as a grinding wheel replacement. "There's the right solution for every application here," says the PFERD product manager. For smaller, hard-to-reach areas, **VICTO**GRAIN tools in the familiar COMBIDISC range are also available. According to Heimann, in future PFERD will also offer long belts in the **VICTO**GRAIN-COOL version.

PFERDERGONOMICS recommends a range of **VICTO**GRAIN tools for sustainably reducing vibration, noise and dust development and for improving working comfort.

PFERDEFFICIENCY recommends a range of **VICTO**GRAIN tools for working for long periods with low levels of fatigue while saving resources and achieving perfect results as quickly as possible.
